

TRBOnet PLUS

The solution incorporates GPS positioning as well as text messaging, voice recording and telemetry processing. These features provide a complete overview of all station and unit activity for fast problem localization, job assignment, control and documentation. All data is recorded continuously and stored for an unlimited period. The data could then be used for further investigation as well as growth planning.

TRBOnet PLUS provides a feature-rich and powerful solution for voice, text, telemetry dispatch and recording as well as location tracking and control.
